

Animal Word Split

Your Task

Is to work out the correct name for each animal by matching the word in column A with the word/s in column B. Here's an example to get you started. Burton's in column A matches with Legless Lizard in column B to give the full name of Burton's legless lizard.

Just to make it tricky, there are some animals whose names are only one word. These words have been split!

Try matching the names and then visit the *Grow Us a Home* (<http://www.growusahome.org.au>) website to check your answers.

Column A	Column B
Burton's	Pardolote
Turtle	Monitor
Marbled	Eagle
Striated	Froglet
Western	Frog
