

Our Park, Our Place strengthening connections beyond the park and into the community, collaboratively building cooling, biodiverse urban green places.

LEGEND

- 1 Green Streets**
Create continuous shady canopy of trees with understorey of biodiverse flowering shrubs and groundcovers along verges, park perimeters and streetscapes. To learn more on how you can take part in this, see City of Canning's *Urban Forest Strategy*, *Request a Street Tree and Verge Landscape Treatments Policy*, and Water Corporation's *Creating a Waterwise Verge*.
- 2 Seasonal Water Celebration**
Improve amenity and enhance habitat and water quality by transforming the stormwater basin into a seasonal vegetated wetland. Introduce annual herbs amongst swathes of rushes and sedges and small groupings of melaleucas. To learn more about how the City is integrating stormwater drains and basins into parklands and how you can integrate water and reduce stormwater runoff, see Water Corporation's *Drainage for Liveability Program*.
- 3 Nature Play + Discovery**
Create shady rest points along a nature-based play trail, integrating interpretive art, rocks and logs to explore, and provide habitat for local wildlife.
- 4 Habitat Gardens**
Create waterwise landscaping with hydrozoning, reducing grassed and paved areas and replacing with native plants, mulched areas, rocks and logs for habitat creation, including log hollows, bird baths and insect hotels amongst the plantings.
- 5 Art + Interpretation**
Integrate environmental and cultural interpretation at key locations, sharing knowledge and enhancing connection and understanding of the site and surrounds.
- 6 Kickabout Space**
Consolidate turf to one large area to the north, and provide large canopy shade trees around the perimeter.
